Atindra Dubey

AI / ML Engineer (Fresher) | Full-Stack Foundation

Pune, Maharashtra | +91 7773842012 | atindradubey2810@gmail.com | LinkedIn | GitHub

Internship Experience

Hashtag Foundry, Pune | *Full Stack Developer Intern* Aug 2026 – Present

- Building Satara Club, a live business project, using React.js for a responsive, production-grade UI integrated with backend APIs.
- Integrated a Figma MCP server and plugin into the development workflow, letting AI tooling read Figma designs directly and generate matching Next.js components, which cut design-to-code handoff time.
- Used the AI-generated code as a starting point, then refactored it into reusable, responsive components and iterated on layouts, styling, and behavior to match the design system.
- Contributing across the full stack by connecting React.js interfaces to REST APIs and databases, handling data flow, validation, and error states end to end.
- Collaborating on feature planning, code reviews, and iterative delivery in an Agile setup using Git and GitHub.

HashedBit Innovations | *MERN Stack Intern* Feb 2026 – Jul 2026

- Developed and maintained the JSCMS (Content Management System) live project in React.js, building responsive admin dashboard pages and reusable UI components.
- Worked across the MERN stack, integrating React.js dashboards with Node.js and Express.js REST APIs and MongoDB to deliver complete content-management features.
- Optimized front-end performance and user experience by structuring reusable components, managing application state cleanly, and resolving UI and API integration issues in production.
- Implemented new features, fixed bugs, and improved the user experience of production applications.

Projects

AI Personal Assistant | *Next.js, TypeScript, Node.js, Python, FastAPI, PostgreSQL, pgvector, LLM, RAG*

– Built a full-stack AI assistant that understands natural-language requests and executes actions via LLM tool/function calling, including creating, updating, prioritizing, and completing tasks and managing goals.
– Designed an agentic architecture in which the assistant retrieves user context, selects backend tools, executes validated actions, and generates context-aware responses.
– Implemented persistent semantic memory with embeddings and PostgreSQL + pgvector, separating temporary conversational context from long-term, user-controlled memory.
– Built a Python (FastAPI) service for document chunking, embedding generation, and vector similarity search, powering grounded RAG responses and consumed by the Next.js frontend over REST APIs.
– Built a task prioritization and planning engine for daily plans, plus a movie, book, and game recommendation system based on preferences and semantic similarity.

AI Code Review & Debugging Platform | *Next.js, TypeScript, Node.js, Python, PostgreSQL, LLM, RAG*

– Built an AI developer assistant that analyzes source code and repositories to detect bugs, security vulnerabilities, performance bottlenecks, and maintainability issues with structured severity levels.
– Developed repository-aware RAG in Python, using code chunking, embeddings, and vector retrieval to supply relevant files, functions, and project context to the LLM.
– Implemented an agentic tool-calling architecture (code search, file retrieval, dependency analysis, test generation) and a debugging workflow that traces error messages to probable root causes.
– Added AI-generated patches and diffs for review, AI-assisted unit test generation, and natural-language repository search.

FitPulse AI | *MongoDB, Express.js, React.js, Node.js, Gemini API, REST APIs*

– Built a MERN fitness platform with workout management, exercise discovery, nutrition and hydration tracking, and BMR/TDEE calculators.
– Integrated the Google Gemini API for a conversational fitness assistant that generates personalized recommendations from user goals and logged activity.
– Designed REST APIs, MongoDB schemas, authentication, and protected routes, integrating third-party APIs securely through the backend.

TradeMatrix | *React.js, Node.js, Express.js, MongoDB, REST APIs, Third-Party Market APIs*

– Built a MERN stock trading simulator with authentication, portfolio management, watchlists, simulated buy/sell orders, and transaction history.
– Integrated third-party market-data APIs for live stock prices and built REST services, MongoDB models, and responsive React dashboards for portfolio analytics.

Technical Skills

- **Languages:** Python (NumPy, Pandas, scikit-learn, FastAPI, PyTorch, LangChain), SQL, JavaScript, TypeScript, Java
- **ML & Deep Learning:** Supervised/Unsupervised Learning, Neural Networks, Keras, TensorFlow, PyTorch, Transfer Learning
- **NLP & Generative AI:** Transformers, BERT, GPT, LLaMA, Hugging Face, Fine-Tuning LLMs, Prompt Engineering, Embeddings
- **LLM Applications:** RAG, LangChain, Vector Search (pgvector), Function Calling, Agentic AI, Semantic Memory, Gemini API
- **Full-Stack & Databases:** React.js, Next.js, Node.js, Express.js, REST APIs, PostgreSQL, MongoDB, HTML5, CSS3, Tailwind CSS
- **Tools:** Git and GitHub, Docker, Cloud Deployment, CI/CD, VS Code, Kiro and Cursor IDE, Agile, Vercel

Education

MIT World Peace University, Pune – Master of Computer Application (MCA) Aug 2024 – Jul 2026

Government Holkar Science College, Indore – Bachelor of Computer Application (BCA) Aug 2020 – Jul 2023

Certifications

- **Coursera** – IBM AI Engineering Professional Certificate (13 courses) Verify
- **Coursera** – IBM Full Stack Software Developer Professional Certificate Verify
